What are Patient Tags?

Patient Tags allows the user to mark a patient as a specific "type", such as: Spanish speaking, requires pre-medication, always misses appointments. These patient can be included/excluded from various message settings by using these tags.

To create Patient Tags:

Click [Settings > Advanced Settings> Patient Tags](#) .

To assign a Patient Tag to a Patient:

Click **Patients**, search for the patient, and in the **Tags** column, select the relevant patient tag.

You can also click **Edit** to the left of the relevant patient name, and in the **Patient Details** window, **PATIENT TAGS** field, turn on the relevant patient tag.

See [Patient Tags](#) article.
