Copy text content to emails template

Can I copy a website, email or document content to an email template?

Yes. You can. Do not copy it though directly from the newsletter or from a website to the template, because it will copy a lot of unnecessary code. This will inflate the template size and will to be too big to send as a message.

Copy the desired content to Notepad, WordPad or a Word document and then copy and paste it into the template.

You can adjust the formatting using the HTML editor in the template.
