

Template Keywords

Last Modified on 01/04/2019 4:23 am EST

What are the keyword values in the templates?

The keyword values, such as "%PracticeName%" are pulled from the office settings and other settings in Patient Communicator. You may select and insert keywords from the drop down menu when selecting **Insert Template Keyword**.

Note: Not all keywords are supported in every practice management software, or in every template. We recommend testing the notification before enabling. See [Email & SMS Templates](#) article.
